ABOUT

A recent Informatics graduate from Universitas Multimedia Nusantara with hands-on experience in software engineering, complemented by projects in artificial intelligence and machine learning. Experienced in developing responsive web interfaces with Next.js and TypeScript, integrating applications with Supabase and PostgreSQL, and building machine learning pipelines for medical-image classification. Interested in Software Engineer, and AI/ML Engineer roles, with a commitment to building reliable, user-centered, and data-driven systems.

EDUCATION

Universitas Multimedia Nusantara

Bachelor of Informatics

GPA: 3.88/4.0

Tangerang, ID

August 2022 – August 2026

Thesis Research:

“Implementation Of Stacking Ensemble for Breast Cancer Classification Using Radiomic Features”

- Designed and implemented a machine learning pipeline to classify breast cancer using radiomics features extracted from medical images.
- Performed feature extraction with PyRadiomics and trained models including SVM, XGBoost, and stacking ensembles, achieving up to 97.9% ROC-AUC score in binary classification.
- Conducted rigorous evaluation with nested cross-validation and analyzed feature importance and model explainability to understand decision patterns.

Relevant Coursework: Software Engineering; Artificial Intelligence

WORK EXPERIENCE

PT Kalbe Farma Tbk

Software Engineer Intern

Jakarta, ID

November 2024 – January 2026

- Designed and built responsive user interfaces for internal web applications using Next.js and TypeScript to support digitalization initiatives within the organization.
- Implemented integration between the frontend and Supabase/PostgreSQL databases, including designing schemas and writing optimized SQL queries to ensure reliable data flow.
- Collaborated with users and senior engineers to translate business and regulatory requirements into usable features and maintainable technical solutions.
- Participated in code reviews, version control workflows, and documentation to maintain consistent code quality and enable knowledge sharing across the development team.
- Troubleshoot and resolved frontend and backend integration issues, improving user experience and supporting continuous improvement of internal digital systems.

Laboratory of Faculty of Engineering and Informatics UMN

Laboratory Assistant for Object Oriented Programming Course 2024/2025

Tangerang, ID

January 2025 – June 2025

- Guided more than 80 students in understanding core OOP concepts (classes and objects, inheritance, polymorphism, encapsulation) and best practices in object-oriented design.
- Led hands-on coding and debugging sessions to strengthen students' practical programming skills using modern programming languages.
- Designed instructional materials and lab exercises to support structured, step-by-step learning experiences.
- Developed lab assessments and examination questions that connect conceptual understanding with real-world programming scenarios.

UNIVERSITY PROJECTS

i27 Studio Company Profile - <https://studioi27.com/>

December 2023

Tech stack: PHP, Laravel, ReactJS, MySQL, Tailwind CSS

- Developed a company profile website for an architectural studio as part of an 8-person team, showcasing portfolio, core values, and project approach.

- Implemented responsive UI and integrated content management features; received positive feedback from industry professionals for clarity and design.

Weather Whisperer - <https://weatherwhisperer.vercel.app/>

June 2023

Tech stack: ReactJS, Tailwind CSS

- Designed and developed a weather forecast website in a 5-person team using ReactJS, Tailwind CSS for the final semester examination in the Introduction to Internet Technology course in 2023.
- Demonstrated understanding of fundamental internet technology concepts and popular JavaScript frameworks through practical implementation; created an interactive and informative website showcasing real-time weather data.

ACTIVITIES

9th International Conference on Mechatronics Engineering (ICOM'24)

Kuala Lumpur, MYS

Speaker

August 2024

- Presented paper titled “Enhancing Home Security with Telegram Bots: Bridging Facial Recognition Technologies for Real-Time Alert Systems”

IEEE STEM WORKSHOP 2024

Tangerang, ID

Volunteer Educator

April 2024 – April 2024

- Volunteered in the IEEE Pre-University STEM Grant Program titled "Inspiring Future Innovators with AI and Machine Learning" alongside IEEE volunteers from Universitas Multimedia Nusantara.
- Taught high school students’ essential technological skills in AI and machine learning through hands-on workshops and interactive lessons; aimed to spark students' interest in technology by sharing passion and knowledge.

PUBLICATIONS

Enhancing Home Security with Telegram Bots: Bridging Facial Recognition Technologies for Real-Time Alert Systems

ADDITIONAL

Career Interests: Software Engineering, AI/ML engineering

Technical Skills: Python, JavaScript/TypeScript, Java, C; ReactJS, Next.js, PHP, Laravel; PostgreSQL, MySQL, SQL

Tools & Design: Git, Figma, Microsoft Office

Soft Skills: Problem solving, Adaptability, Collaboration, Mentoring.

Languages: Indonesian (native); English — TOEIC Listening & Reading: 960/990 (Listening: 495, Reading: 465), August 2026
