EDUCATION

•Bachelor of Informatics

Aug 2022 – Aug 2026

Multimedia Nusantara University

GPA: 3.88/4.00

- Relevant coursework: Data Structures & Algorithms, Machine Learning, Database Systems, Computer Networks, Web Programming, Mobile Cross-Platform Programming.
- Teaching Assistant for Object Oriented Programming, mentoring 80 undergraduate students across 2 semesters.

Thesis Research:

“Implementation of Stacking Ensemble for Breast Cancer Classification Using Radiomic Features”

- Designed and implemented a machine learning pipeline to classify breast cancer using radiomics features extracted from medical images.
- Performed feature extraction with PyRadiomics and trained models including SVM, XGBoost, and stacking ensembles, achieving up to 97.9% ROC-AUC score in binary classification.
- Conducted rigorous evaluation with nested cross-validation and analyzed feature importance and model explainability to understand decision patterns.

PROFESSIONAL EXPERIENCE

•Software Engineer Intern

Nov 2024 – Jan 2026

Kalbe Farma Tbk.

- Designed and shipped responsive interfaces in Next.js and TypeScript for an internal Regulatory Information Management (RIM) system, cutting manual dossier and submission tracking time by 30% for regulatory affairs and operations staff.
- Architected Supabase/PostgreSQL schemas to model product registrations, submission statuses, and approval records, writing optimized SQL queries that cut average query response time from 900ms to 250ms across 5+ system modules.
- Partnered with 3 senior engineers and regulatory affairs stakeholders to translate compliance requirements into 10+ maintainable features (submission tracking, product registration, approval workflows), achieving 100% on-time delivery across two release cycles.
- Drove code quality through peer code reviews and structured Git workflows on an 8-person team, contributing documentation that shortened new-developer onboarding time by 25%.
- Diagnosed and resolved 20+ frontend-backend integration bugs in the RIM platform, reducing production incident reports by 40% and improving data reliability for regulatory record-keeping.

PROJECTS

•Lee Kuan Yew RAG Chatbot

August 2026

Personal Project

lee-kuan-yew-chatbot.app

- Built a source-grounded RAG (Retrieval-Augmented Generation) educational chatbot in React, TypeScript, and Express, using Google’s Gemini API to generate historically-grounded answers on leadership, governance, and economics based on curated Lee Kuan Yew source documents.
- Designed a custom client-side retrieval engine that chunks documents, filters stop words, and ranks the top-4 most relevant passages per query, ensuring generated answers stay grounded in verifiable source material rather than model hallucination.
- Implemented a knowledge-base management UI allowing users to upload, preview, and manage custom source documents, with an evidence panel displaying retrieved passages and citations for transparency.
- Deployed as a full-stack app on Vercel using serverless functions for the API layer, with Vite for the frontend build and Tailwind CSS for styling.

•OTOT – Running Tracker App

Oct 2024 – Dec 2024

University Project

GitHub

- Built a native Android running-tracker app in Kotlin, integrating Google Maps SDK to record GPS running paths and a foreground `TrackingService` for continuous background location tracking.
- Implemented user authentication and cloud data persistence using Firebase Auth and Firestore, storing run history (distance, path, timestamps) synced per user profile.
- Designed a multi-screen fragment-based UI (onboarding, live tracking, run history, profile) following Android’s Fragment/Activity architecture pattern.

•i27 Studio Company Profile

December 2023

University Project

studioi27.com

- Built a company profile website for an architectural studio using PHP, Laravel, ReactJS, and MySQL as part of an 8-person team, structuring 5+ content sections including profile, projects, and core values.
- Implemented a responsive UI and custom CMS-driven content management module, enabling non-technical staff to update 20+ project entries without code changes; received positive feedback from industry professionals for clarity and design.

VOLUNTEERING & ORGANIZATIONAL EXPERIENCE

- Speaker, 9th International Conference on Mechatronics Engineering (ICOM’24)

Kuala Lumpur, MYS

August 2024

– Presented a peer-reviewed paper, "Enhancing Home Security with Telegram Bots: Bridging Facial Recognition Technologies for Real-Time Alert Systems," to an international IEEE-affiliated audience of researchers and practitioners at a hybrid conference hosted by IIUM’s Kulliyyah of Engineering.

– Communicated a facial-recognition and Telegram-bot-based real-time alert system to a technical audience, with the paper subsequently published on IEEE Xplore. <https://ieeexplore.ieee.org>

- Volunteer Educator, IEEE STEM Workshop 2024

Tangerang, ID

April 2024

– Co-led "Inspiring Future Innovators with AI and Machine Learning," an IEEE Pre-University STEM Grant program (Region 10) delivered alongside IEEE volunteers from Universitas Multimedia Nusantara, funded by an IEEE outreach grant.

– Designed and delivered hands-on AI/ML workshops for 40+ high school students, translating technical concepts into interactive lessons to spark early interest in technology careers.

TECHNICAL SKILLS

- Languages: Python, Java, C/C++, JavaScript/TypeScript, Kotlin
- AI / Machine Learning: PyTorch, TensorFlow, scikit-learn, PyRadiomics
- Web & Backend: React, Next.js, Node.js/Express, React Native, PHP, Laravel
- Databases / Cloud: PostgreSQL, MongoDB, MySQL, Supabase, Firebase.
- Tools & Automation: Git, GitHub Actions, Figma, n8n, Docker, Linux, Microsoft Office

ACHIEVEMENTS

- Dean’s List / High Academic Standing— GPA 3.88/4.0, Bachelor of Informatics

2022 – 2026
- IT Specialist – Artificial Intelligence— Certiport (Pearson VUE) certification

Aug 2026
- TOEIC Listening & Reading— Score: 960/990 (Listening: 495, Reading: 465)

Aug 2026
- IEEE Publication, ICOM’24— Peer-reviewed paper indexed on IEEE Xplore

Aug 2024

ADDITIONALS

- Career Interests: Software Engineering, AI/ML Engineering, Mobile Development
